

Klip River to the Dinuzulu Restoration Rebellion

Actors, clocks, branches, war goals, territorial settlements, and finalizers.

25 August 2026

Base commit 9abbd34 + live working tree

The key distinction

A ZUL-backed KLR victory is an alternate-history exit

KLR absorbs British Natal while ZUL takes most of Natal and retains all Zululand. Because the later restoration chain requires a British NAL that has destroyed ZUL, coalition victory normally prevents the scripted Dinuzulu rebellion. A British/Natal victory that destroys ZUL is the direct bridge instead.

No single rebellion event

The live chain is a governance event, movement, claimant handoff, restored puppet, TRN appeal, and locked secession play.

Dinuzulu is date-gated

From 1 Jan 1884 the historical template can lead. An earlier uprising uses a generated Zulu claimant.

INCLUDED

KLR boundary commission - Zulu decision weights - KLR creation packet - ORA appeal - secession and punitive outcomes - Anglo-Zulu bridge - post-annexation government - Thirteen Chieftoms - Dinuzulu restoration - TRN arms bargain - final war results

SEQUENCE

AUTOMATIC PLAY COMPOSITION

Role	Country	Live effect
Initiator	ZUL	Primary goal: annex NAL
Initiator backers	KLR; ORA if pledged	ORA makes KLR a protectorate
Target	NAL	British Natal Colony
Target backer	GBR	Added automatically
Natal counter-goals	Annex KLR; annex ZUL	Both are scripted into the play

Result	Scripted settlement	Dinuzulu-restoration bridge
ZUL annexes NAL / NAL backs down	KLR annexes NAL; KLR keeps 3 Natal provinces; ZUL takes the other 10 and all Zululand	No. British Natal disappears and ZUL survives
NAL annexes ZUL	KLR is folded back into NAL; Boer flight follows; ZUL is destroyed	Yes, if NAL owns all nine Zululand provinces
NAL annexes KLR only	KLR falls; event .091 moves Boer settlers; ZUL survives	No immediate bridge; a later ZUL conquest is needed
White peace / no terminal goal	KLR survives unless separately annexed; shared markers resolve	No. Both ZUL and KLR can survive
ZUL backs down	Colonial-status-quo handler resolves KLR; engine counter-goal ordering governs ZUL's final ownership	Only if the engine-applied goals actually destroy ZUL

REDUCED NATALIA OWNERSHIP

Holder	Territory / condition	Identity result
KLR	xBBCA32, xDE0EDE, x552449	Remains KLR; no immediate tag change
ZUL	The other 10 Natal provinces plus all 9 Zululand provinces	Retains the independent kingdom
Later conversion	KLR must own all STATE_NATAL and complete its Great Trek stage	Only then change_tag = NAL

CONTINUATION ROUTES

Earlier result	Political state	Next requirement
Peaceful Mzinyathi cession	ZUL survives; 25-year truce with NAL and GBR	Later conquest after the truce or another script
KLR coalition victory	ZUL survives and British Natal is destroyed	Standard restoration chain is closed
KLR coalition defeated in full	NAL destroys both KLR and ZUL	Immediate post-annexation gate can open
Punitive Natal victory	NAL annexes ZUL after option C	Shortest direct route from KLR question to settlement
KLR-only Natal victory / white peace	ZUL survives	Later Anglo-Zulu or ordinary conquest required

Explicit later bridge: Ultimatum to Ulundi

AI NAL, as a subject with Civilizing Mission, can open a locked return-state play against an idle ZUL. A Natal victory can eliminate ZUL and transfer conquered British land into NAL.

Live reachability caveat

Both the decision and event require is_ai = yes. The decision's AI chance is zero unless the Imperial Confederation route sets its acceleration flag. Player NAL has no entry through this decision file.

PARALLEL, NOT CAUSAL

Shepstone and indenture

British Natal schedules the Native Locations after 60 days. Accepting creates the Shepstone land amendment, converts 90% of non-peasant Zulu pops in Natal to peasants, and schedules indenture 10-19 years later. This domestic line does not gate the later Zulu restoration.

Footprint-exact gate

NAL must be a British colony, own all nine Zululand provinces, face no ZUL-owned state, and have no prior settlement resolution. The monthly pulse then schedules event .030 for 30 days later. Firearms progress is archived before ZUL disappears.

Force integration

+25% Zulu radicals. Create the Zulu Restoration Movement immediately. No protective administration modifier. This is the fastest likely route to the uprising threshold.

Thirteen Chiefdoms

-5% Zulu radicals. Add Imperial Administration amendment: -25% qualifications, +10% food security, and reduced radicalism effects. Create the same movement. Strict Historical AI selects this branch.

Restore subordinate crown

Immediately recreate all nine provinces as a ZUL puppet with +75 liberty desire. No scripted restoration movement or rebellion. Later integration requires liberty desire ≤ 0 .

Movement route

Direct integration and the chiefdom settlement both create movement_sb_zulu_restoration. The monthly pulse waits for political_movement_radicalism ≥ 1 , then begins the uprising.

Chiefdom dismantling

The amendment cannot be repealed directly. After a five-year cooldown, a decision removes it and adds 10% Zulu radicals.

STATE MACHINE

Resolution	Handler	Result
ZUL goal enforced	Zulu independence finalizer	ZUL becomes independent; both tags mark resolution
NAL goal enforced	Zulu reannexation finalizer	NAL annexes ZUL and marks resolution
NAL backs down	Independence finalizer	ZUL becomes independent
ZUL backs down	Reannexation finalizer	NAL annexes ZUL
White peace	Independence finalizer	White peace explicitly favors Zulu independence

AUDIT NOTES

1884 gate

An earlier uprising is claimant-led, not Dinuzulu-led.

KLR identity

Coalition victory leaves the tag KLR until all Natal is owned and the Great Trek completes.

Strict AI

The strict full-AI route selects peaceful Mzinyathi cession and later Thirteen Chiefdoms.

TRN land

The five provinces paid to TRN are not returned by either restoration finalizer.

Firearms

Archived adoption progress is restored to recreated ZUL.

Rule scope

KLR pops, farm, and two battalions are story assets; only temporary combat rolls are gated.
